

StepCat Quick Start Guide

StepCat Calculator v200

StepCat is an independent calculation and recordkeeping tool. Estimates are projections. Use Finalized mode and the Official Total Earned Amount for confirmed records.

What's New in v200

- Copied rows paste as plain values so the spreadsheet controls formatting.
- The Profitability Analysis Template includes formulas for older and in-progress rows.
- Clear Card hides only the visible Result Card; Saved History is not deleted.
- Help and Settings use top-corner close buttons.
- For best estimate accuracy, add challenges after warm-up week ends.

Quick Start

- Choose Estimate or Finalized.
- For Estimate, select Member or Non-Member and enter Gross Pot, Entry Fee, and Eligible Winners.
- For Finalized, confirm Game Type and enter Entry Fee plus the Official Total Earned Amount.
- Use Disqualified / Lost Entry Fee only when the full Entry Fee was forfeited.
- Add Sheet Details when useful, then tap Calculate & Save.
- Use Saved History and Spreadsheet Copy Setup to copy results.

Estimate Accuracy

For best estimate accuracy, add new challenges after warm-up week ends and the challenge begins proper. Gross Pot and Total Players are usually more reliable then.

Update Eligible Winners as the challenge progresses. Eligible Winners drives the estimate because StepCat divides the adjusted pot by that number.

Finalized Records

Official Total Earned Amount means the total returned, not just extra profit.

Example: a \$40 entry plus \$4.36 profit should be entered as \$44.36.

Result Logic

- Profit: Earned is greater than Entry Fee.
- Draw: Earned equals Entry Fee, or an estimate would otherwise be at/below Entry Fee.
- Disqualified / Lost Entry Fee: only when the full Entry Fee was forfeited.

Spreadsheet Workflow

StepCat copies plain tab-separated values. Paste into the first cell of the target row. The spreadsheet controls font size, alignment, borders, and formulas.

Default copy order: Game Name, Start Date, End Date, Payment Type, Entry Fee, Earned, Profit, Draw, Lost, ROI, Result.

Older rows: paste old entries into matching columns, or recalculate them in StepCat and paste the copied row over the matching row.

Formula columns such as ROI and Result should remain available in the template so supported missing values can calculate automatically.

Saved History Safety

- Clear Card hides only the visible Result Card.
- Saved History Delete removes that saved entry.
- Clear History can be restored from the current device backup.
- Individual Saved History Delete actions are permanent.
